

Voice Alarm

PAMMI Public Announcement Man Machine Interface

The PAMMI software provides connection and control of the Honeywell Voice Alarm System via a graphical user interface on a Microsoft Windows® based personal computer.

Honeywell Voice Alarm System

The graphical user interface can be customized with individual background pictures, logos and zone configurations. For graphics, a bitmap is utilised and the building is divided in zones. The lower half of the screen is filled with the message windows and software keys that may be given different functions and names. These keys are used, for example, to display various groups of digital announcement texts, as action keys or to change in a different software window.

In combination with a Honeywell SCU (System Communication Unit) individual prerecorded audio messages can be played (DVA – Digital Voice Announcement function). The PAMMI is built of several software modules which are individually configured to suit the hardware specifications of the Honeywell Voice Alarm System and the building design.

Key Features:

- Full-screen application, may be operated with touch screen
- Graphic display (e.g. building layout)
- Zone scheme with selection and status
- Recording, prior listening and discarding of announcements (with SCU)
- Simultaneous playback of prerecorded audio messages (with SCU)
- Scheduler function for automatically controlled audio messages
- System status indication and logging

Connection

The PAMMI is connected via Ethernet to the Honeywell Voice Alarm system.

Hardware

As standard the PAMMI will work on any standard personal computer with no special extension cards or expensive equipment needed.

PAMMI system requirements

- Standard PC with Intel Pentium 4 or higher
- 1 GB RAM or higher
- Free hard disk space min 200MB
- CD-ROM / USB
- Network card 100 Mbit or higher
- Microsoft Windows® 2000 / XP Professional / Vista / 7 compatible
- Monitor with 1280 x 1024 pixel (ratio 4:3, 16:9 not supported)

DESCRIPTION	ORDER CODES
PAMMI server software licence	583641
Software licence message memory	583642
PAMMI server/client software licence	583643
